Sarkar

International Development Law

Rule of Law, Human Rights, and Global Finance

As we move further into the 21st century, it is incumbent upon lawyers and law students to understand and manage the complexities of sustainable development. International Development Law: Rule of Law, Human Rights, and Global Finance offers a coherent and systematic overview of the many issues and underlying trends that affect 'international development law' and the underlying legal architecture between developing countries and advanced nations. Professor Sarkar describes how international development works, its shortcomings, its theoretical and practical foundations, along with the prescriptions for the future. The text is structured into two basic parts: the first part deals with the theoretical and philosophic foundations of the subject, and the second part sets forth issues relating to the international financial architecture, namely, international borrowing practices, privatization, and emerging economies. International Development Law provides the reader with new perspectives on the origins of global poverty, identifies legal impediments to sustainable economic growth, and provides a better understanding of the challenges faced by the international community in resolving global policy issues.

International Development Law: Rule of Law, Human Rights, and Global Finance provides a tightly interwoven, well-organized, multi-disciplinary approach to the complex legal issues underlying sustainable international development. Professor Sarkar provides an overarching view of the legal principles that constitute international development law in an easily understandable way. This book gives the reader new insights on the origins of global poverty, identifies legal impediments to long-term, sustainable economic growth, and provides a better understanding of the challenges faced by the international community in resolving global poverty issues.
