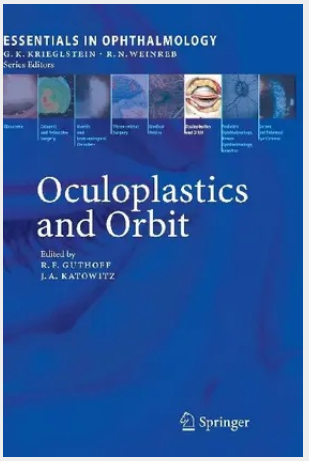
Guthoff / Katowitz

Oculoplastics and Orbit



This volume details the latest concepts and management techniques in oculofacial plastic surgery. It contains in-depth reviews of orbital disorders such as capillary hemangiomas and venolymphatic malformations, offering new strategies in diagnosis and management. Coverage also includes recent developments in the diagnosis and management of lacrimal disorders, including salivary gland transposition for severe dry eye and lacrimal stenosis. In addition, the book highlights various topics related to cosmetic facial surgery, including: rejuvenation of the aging face, facial sculpting with injectable filler materials, and mechanical and chemical facial peels. It will prove to be a valuable resource for both the comprehensive ophthalmologist as well as subspecialists with a particular interest in disorders of the orbit, eyelids, lacrimal system, and other facial structures.
