Ideal Spaces

Ideal spaces are a very general class of normed spaces of measurable functions, which includes e.g. Lebesgue and Orlicz spaces. Their most important application is in functional analysis in the theory of (usual and partial) integral and integro-differential equations. The book is a rather complete and self-contained introduction into the general theory of ideal spaces. Some emphasis is put on spaces of vector-valued functions and on the constructive viewpoint of the theory (without the axiom of choice). The reader should have basic knowledge in functional analysis and measure theory.

Artikelnummer: 9783540631606
Medium: Buch
ISBN: 978-3-540-63160-6
Verlag: Springer
Erscheinungstermin: 17.07.1997
Sprache(n): Englisch
Auflage: 1. Auflage 1997
Serie: Lecture Notes in Mathematics
Produktform: Kartoniert
Gewicht: 248 g
Seiten: 150
Format (B x H): 155 x 235 mm
