Urban Geography

A Study of Site, Evolution, Patern and Classification in Villages, Towns and Cities

This book is divided into three parts. The first deals with typical settelements in each of the seven continents, the early stages of settlements, land surveys and general phases of town evolution. The second part discusses changes in site and patter, from Neolithic to modern times. The third part specializes in topographic and functional controls in modern towns. Chapters on Planning, Regional Surveys and Classification of towns close the book. There are about 300 specially drawn plans and diagrams of towns - which should appeal to the sociologist and town planner as well as to every serious student of geography. This book was first published in 1949.
