Interdisciplinary Economics

Kenneth E. Boulding's Engagement in the Sciences

Kenneth Boulding was a prolific writer across so many different fields that not only is he often much referred to and cited, he is considered a core member of many of these fields. Boulding is the quintessential interdisciplinary scholar. He died in 1993, but he has left a legacy in economics, conflict studies, systems theory, ecology, biology, communication studies, and ethics. As an economist proper he has tested and expanded the boundaries of that field without unduly "invading" and undermining the expertise and established knowledge of the other social sciences. This proposed volume will allow scholars who have worked or are starting to work in areas that Boulding has initiated, established and made a continued contribution to, to understand the links between these fields and other related ones. The volume will establish a source of inspiration for some time to come.

As interdisciplinary research is rightfully and increasingly being pursued in the social sciences, Kenneth Boulding is becoming a key figure regularly referred to. He has stretched the boundaries of the different fields in the social sciences, crossed and connected them. This volume offers valuable insights from his excursions.
