CT2008: Tomography Confluence

An International Conference on the Applications of Computerized Tomography

Inverse measurements are gaining importance in all areas of science and engineering. Computerized Tomography (CT) is a powerful tool that can be applied in a variety of situations for making such measurements. These CT images thus produced give internal structures (in case of solids) of the object with breaking them. In case of fluids, gases, plasmas and multiphase flows, CT techniques give cross sectional measurement in a non-invasive manner thus not disturbing the flow field. CT2008 was aimed at bringing together various experimental groups (in diverse areas) together on the same platform. Crosstalk, thus generated, will go a long way in improving the current experimental methodologies in a significant way.
