

Comparative Area Studies

Methodological Rationales and Cross-Regional Applications

In the post-World War II era, the emergence of 'area studies' marked a signal development in the social sciences. As the social sciences evolved methodologically, however, many dismissed area studies as favoring narrow description over general theory. Still, area studies continues to play a key, if unacknowledged, role in bringing new data, new theories, and valuable policy-relevant insights to social sciences. In *Comparative Area Studies*, three leading figures in the field have gathered an international group of scholars in a volume that promises to be a landmark in a resurgent field. The book upholds two basic convictions: that intensive regional research remains indispensable to the social sciences and that this research needs to employ comparative referents from other regions to demonstrate its broader relevance. *Comparative Area Studies (CAS)* combines the context-specific insights from traditional area studies and the logic of cross- and inter-regional empirical research. This first book devoted to CAS explores methodological rationales and illustrative applications showing how area-based expertise can link into cutting-edge comparative analytical frameworks.
