Perception

This is the fifth volume in the Vancouver Studies of Cognitive Science Series, an interdisciplinary series bringing together topics of interest to psychologists, philosophers, cognitive scientists, and linguists. Perception covers the problem of depth perception, the interaction of perception and memory, the perception of time, and principles of vision. All chapters focus on fundamental questions about the nature of visual perception.

Papers presented at Simon Fraser University and solicited for this text focus on fundamental questions about the nature of visual perception, specifically concerning the form and content of visual representations.
