Green Energy

Meta-analysis of the Research Results

This book presents novel research that represents a multidimensional approach to green energy. Each chapter addresses its subject from diverse perspectives, including financial, technological, and social. The results shown also consider various approaches to the collection and processing of data on green energy.
The book also reports on analyses of data from official records and databases, as well as the analysis of primary data obtained directly. The book will be of interest to those working in green energy as well as researchers interested in the methods of scientific research.
