

Global Inequalities at Work

Work's Impact on the Health of Individuals, Families, and Societies

A map of the relationship between work and health that is truly global, both geographically and in its coverage of the impact of work on the health of individuals, families, and societies, has not previously been drawn. *Global Inequalities at Work* is the first book to fill in the map. Drawing from studies done around the world, it critically examines the many ways in which work is affecting health around the world. The first section covers the wide range of risks - physical, chemical, and social - to the health of employees in agricultural, industrial, and post-industrial workplaces. Part II provides a detailed analysis of how working conditions can dramatically influence the health and welfare of family members, including children, elderly parents, and the disabled, in both the developing and industrial world. Part III examines the relationships between work and health at the societal level by focusing on two examples: the ways in which working conditions affect income inequalities and health, and the ways in which working conditions influence gender inequalities and health. Part IV investigates the new challenges to and opportunities for improving the relationship between work and health that are presented by a rapidly globalizing economy. *Global Inequalities at Work* addresses these issues at a time when globalization is both markedly changing the impact of work on the health of individuals, families, and societies, and radically revising what can be done about it. Leaders from universities, international organizations, and nongovernmental organizations bring to this edited volume expertise from six continents.

A map of the relationship between work and health that is truly global--both geographically and in its coverage of the impact of work on the health of individuals, families, and societies, has not previously been drawn. *Global Inequalities at Work* is the first book to fill in the map.

Drawing from studies done around the world, it critically examines the many ways in which work is affecting health around the world. The first section covers the wide range of risks--physical, chemical, and social--to the health of employees in agricultural, industrial, and post-industrial

workplaces. Part II provides a detailed analysis of how working conditions can dramatically influence the health and welfare of family members--including children, elderly parents, and the disabled--in both the developing and industrial world. Part III examines the relationships between work and

health at the societal level by focusing on two examples: the ways in which working conditions affect income inequalities and health, and the ways in which working conditions influence gender inequalities and health. Part IV investigates the new challenges to and opportunities for improving the relationship between work and health that are presented by a rapidly globalizing economy.

Global Inequalities at Work addresses these issues at a time when globalization is both markedly changing the impact of work on the health of individuals, families, and societies, and radically revising what can be done about it. Leaders from universities, international organizations, and

nongovernmental organizations bring to this edited volume expertise from six continents.
