Maekawa / Belady

Operating Systems Engineering

Proceedings of the 14th IBM Computer Science Symposium Amagi, Japan, October 1980

Synchronization mechanisms for parallel processing.- A parallel programming language and description of scheduler.- Specification of schedulers with algebraic specification techniques.- Generalized dynamic authorization mechanisms.- Program behavior and its models.- CPU scheduling for effective multiprogramming.- Dynamic tuning of operating systems.- On pseudo workload for performance measurement of interactive systems.- Modifiability of large software systems.- Operating system conceptual model for ease of extension.- Perspective of OS interface to users.- Intelligent console a universal user interface of a computer system.- Structuring distributed programs with control fault detection.- A distributed operating system for a binary tree multiprocessor.- Gamma-net: Computer network coupled by 100 MBPS optical fiber ring bus -system planning and ring bus subsystem description-.- Product validation for standardized network protocol.- Protection and synchronisation in a message-switched system.- On the progress of communication between two machines.- Form transformer -a formalism for office form manipulation-.- Automated design of concurrent process systems.- Concurrent programming.- Streams and managers.

Synchronization mechanisms for parallel processing.- A parallel programming language and description of scheduler.- Specification of schedulers with algebraic specification techniques.- Generalized dynamic authorization mechanisms.- Program behavior and its models.- CPU scheduling for effective multiprogramming.- Dynamic tuning of operating systems.- On pseudo workload for performance measurement of interactive systems.- Modifiability of large software systems.- Operating system conceptual model for ease of extension.- Perspective of OS interface to users.- Intelligent console a universal user interface of a computer system.- Structuring distributed programs with control fault detection.- A distributed operating system for a binary tree multiprocessor.- Gamma-net: Computer network coupled by 100 MBPS optical fiber ring bus -system planning and ring bus subsystem description-.- Product validation for standardized network protocol.- Protection and synchronisation in a message-switched system.- On the progress of communication between two machines.- Form transformer -a formalism for office form manipulation-.- Automated design of concurrent process systems.- Concurrent programming.- Streams and managers.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783540116042
Medium: Buch
ISBN: 978-3-540-11604-2
Verlag: Springer
Erscheinungstermin: 01.09.1982
Sprache(n): Englisch
Auflage: 1. Auflage 1982
Serie: Lecture Notes in Computer Science
Produktform: Kartoniert
Gewicht: 1470 g
Seiten: 470
Format (B x H): 155 x 235 mm
