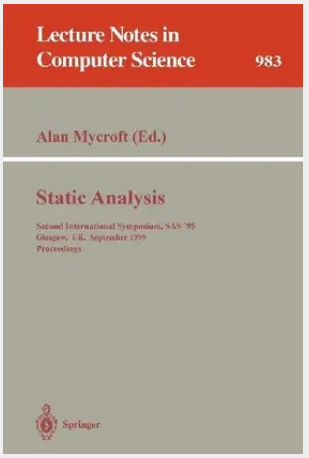
Static Analysis

Second International Symposium, SAS '95, Glasgow, UK, September 25 - 27, 1995. Proceedings



This book constitutes the refereed proceedings of the Second International Symposium on Static Analysis, SAS '95, held in Glasgow, UK, in September 1995. Static Analysis is increasingly recognized as a foundation for high-performance implementations and verification systems of high-level programming languages.
22 full revised papers selected from a total of 55 submissions are presented; they address static analysis issues for different programming paradigms; in particular concurrent, constraint, functional, imperative, logic, and object-oriented programming are addressed. In addition there are abstracts or full papers for three invited presentations and two system descriptions.
