Fuchs / Jirsa

Coordination: Neural, Behavioral and Social Dynamics

One of the most striking features of Coordination Dynamics is its interdisciplinary character. The problems we are trying to solve in this field range from behavioral phenomena of interlimb coordination and coordination between stimuli and movements (perception-action tasks) through neural activation patterns that can be observed during these tasks to clinical applications and social behavior. It is not surprising that close collaboration among scientists from different fields as psychology, kinesiology, neurology and even physics are imperative to deal with the enormous difficulties we are facing when we try to understand a system as complex as the human brain.

The chapters in this volume are not simply write-ups of the lectures given by the experts at the meeting but are written in a way that they give sufficient introductory information to be comprehensible and useful for all interested scientists and students.

Artikelnummer: 9783540744764
Medium: Buch
ISBN: 978-3-540-74476-4
Verlag: J.B. Metzler
Erscheinungstermin: 03.01.2008
Sprache(n): Englisch
Auflage: 1. Auflage 2008
Serie: Understanding Complex Systems
Produktform: Gebunden
Gewicht: 723 g
Seiten: 355
Format (B x H): 160 x 241 mm
