

EU Merger Control

Economic analysis plays a pivotal role in competition enforcement. Integrating an economic perspective on merger control with a legal perspective throughout, this is a comprehensive reference work on merger control in the EU. Each chapter includes an analysis of the economic methods that have been employed in merger cases or that can be employed in merger assessment, such as merger simulation and critical loss analysis. Whilst focusing on EU practice, the work also highlights key procedures and case law across the member states. A comparison with US procedure is also considered. Analysing both substantive and procedural law in detail, this is the most comprehensive work on EU merger control and is invaluable for merger assessment.

Economic issues play a pivotal role in competition enforcement. Integrating economic and legal analysis throughout, this work provides expert coverage of both the substantive and procedural law relating to merger control in the EU, considering EU and national case law. The key substantive and procedural issues in the US are also considered.
