

Judicial Decision Making

Is Psychology Relevant?

In the mid-1970s, as a social psychologist dedicated to the application of knowledge, I welcomed our field's emerging interest in the legal system. I have always been fascinated by jury trials—something about the idea that two conceptions of the truth were in irrevocable conflict and jurors could choose only one of them. More important, the criminal justice system is a major social force that has been ignored by social psychologists for most of the twentieth century. As I systematically began to explore the applications of social psychological concepts to the law 20 years ago, I experienced the delight of discovery similar to that of a child under a Christmas tree. It has been satisfying to be among the cohort of researchers who have studied the legal system, especially trial juries, from a psychological perspective. I believe we have learned much that would be useful if the system were to be revised. If the system were to be revised" . . . there's the rub. As I have stated, my original motivation was the application of knowledge. Like other social scientists, I believed—perhaps arrogantly—that the results of our research efforts could be used to make trial juries operate with more efficiency, accuracy, and satisfaction. Over the last two decades, much knowledge has accumulated. How can we put this knowledge to work? Judges are the gatekeepers of the legal system.
