Modern Electrochemistry 2B

Electrodics in Chemistry, Engineering, Biology and Environmental Science

This book had its nucleus in some lectures given by one of us (J. O'M. B.) in a course on electrochemistry to students of energy conversion at the University of Pennsyl- nia. It was there that he met a number of people trained in chemistry, physics, biology, metallurgy, and materials science, all of whom wanted to know something about electrochemistry. The concept of writing a book about electrochemistry which could be understood by people with very varied backgrounds was thereby engendered. The lectures were recorded and written up by Dr. Klaus Muller as a 293-page manuscript. At a later stage, A. K. N. R. joined the effort; it was decided to make a fresh start and to write a much more comprehensive text. Of methods for direct energy conversion, the electrochemical one is the most advanced and seems the most likely to become of considerable practical importance. Thus, conversion to electrochemically powered transportation systems appears to be an important step by means of which thedifficulties of air pollution and the effects of an increasing concentration in the atmosphere of carbon dioxide may be met. Cor- sion is recognized as having an electrochemical basis. The synthesis of nylon now contains an important electrochemical stage. Some central biological mechanisms have been shown to take place by means of electrochemical reactions. A number of American organizations have recently recommended greatly increased activity in training and research in electrochemistry at universities in the United States.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9780306463259
Medium: Buch
ISBN: 978-0-306-46325-9
Verlag: Humana
Erscheinungstermin: 31.01.2001
Sprache(n): Englisch
Auflage: 2. Auflage 2000
Serie: Modern Electrochemistry 1, 2A, and 2B.
Produktform: Kartoniert
Gewicht: 1720 g
Seiten: 516
Format (B x H): 156 x 234 mm
