# Intelligence and Security Informatics for International Security

Information Sharing and Data Mining

On September 11, 2001 the World became cognizant of the security challenges it faces on an international scale. With this awareness a commitment has come from the scientific, engineering, and health communities to help the world meet an array of security challenges. From these activities the science of "Intelligence and Security Informatics" is emerging, which will influence a new generation of policy makers, practitioners, researchers, and students. **INTELLIGENCE AND SECURITY INFORMATICS FOR INTERNATIONAL SECURITY: Information Sharing and Data Mining** presents a systematic national security research framework, and discusses IT technical components, and directions.

The book reflects a decade of leading-edge research on intelligence and security informatics from the Artificial Intelligence Laboratory and the NSF COPLINK Center for Homeland Security Information Technology Research, as well as the application in real-world community situations by the center's director and the book's author, Dr. Hsinchun Chen.

On September 11, 2001 the World became completely cognizant of the security challenges it faces on an international scale. With this awareness a commitment has come from the scientific, engineering, and health communities to help meet the world meet an array of security challenges. From these activities the science of "Intelligence and Security Informatics," is emerging, which will influence a new generation of policy makers, practitioners, researchers, and students. This book presents a systematic national security research framework, and within this context, the book discusses IT technical components, and directions. The book synthesizes the research in the field, focusing on information integration and data mining in particular. Integrated in the discussion are a number of real-world case studies illustrating how security technologies are developed and how they can be applied in critical law enforcement, emergency response, intelligence analysis, and terrorism contexts.
