Interpolation of Spatial Data

Some Theory for Kriging

Prediction of a random field based on observations of the random field at some set of locations arises in mining, hydrology, atmospheric sciences, and geography. Kriging, a prediction scheme defined as any prediction scheme that minimizes mean squared prediction error among some class of predictors under a particular model for the field, is commonly used in all these areas of prediction. This book summarizes past work and describes new approaches to thinking about kriging.

This monograph in the area of spatial statistics presents recent results on the topic of kriging, a subject with applications to geostatistics, mining, and hydrology.
