Matrix

Cyberpop

Digital Lifestyles and Commodity Culture

Cyberpop is an analysis of cyberculture and its popular cultural productions. The study begins with a Foucaultian model of cyberculture as a discursive formation, and explains how some key concepts (such as 'virtuality,' 'speed,' and 'Connectivity') operate as a conceptual architecture network linking technologies to information and individual subjects. The chapters then each focus on a particular cyberfiguration, including Hollywood films (GATTACA, The Matrix), popular literature (William Gibson's Neuromancer, Scott Westerfeld's Polymorph), advertising for digital products and services (Apple Computer's '1984/McIntosh' campaign, AT&T's 'mLife' campaign), digital artworks (including virtual females such as Motorola's 'Mya' and Elite Modeling Agency's 'Webbie Tookay,' and work by visual artist Daniel Lee for Microsoft's 'Evolution' campaign), and video games (Tomb Raider). Each close reading illustrates the ways in which representations of digital lifestyles and identities - which typically fetishize computers and celebrate a 'high tech' aesthetic encourage participation in digital capitalism and commodity cyberculture. Matrix argues that popular representations of cyberculture often function as forms of social criticism that creatively inspire audiences to 'think different' (in the words of Mac advertising) about the consequences of the digitalization of everyday life.

Cyberpop is an analysis of cyberculture and its popular cultural productions, looking at film, art, advertising campaigns and video games. Matrix addresses the representation of cyberculture and the consequences of the digitalization of everyday life.
