

Green Analytical Methods and Miniaturized Sample Preparation Techniques for Forensic Drug Analysis

Green Analytical Methods and Miniaturized Sample Preparation techniques for Forensic Drug Analysis provides a comprehensive overview of GAMs in forensic drug analysis, including green sample preparation techniques, in-situ analytical platforms (such as DIC and μ PADs), and on-site sample preparation. The book discusses not only eco-friendly GAM's, but also methods which provide high sample throughput and cost-effective analysis, and are therefore of immense use in resource limited laboratories of developing countries. This is a comprehensive source of literature for analytical scientists in this developing area of sustainable and affordable analytical methods.
