

Agriculture Toward Net Zero Emissions

Agriculture Toward Net Zero Emissions explores how agriculture has historically contributed to carbon emissions and then takes the reader forward, offering insights into an integrated approach to reducing those emissions toward the COP26 goal. The dual challenge of increasing production to meet population and nutrition food demands while reducing the traditional emissions generated by production practices is significant. It requires understanding the foundation of current practices and then revising those underlying principles to reflect the resources and greater insights of today. This book provides an overview of the current state of the science, explores the development of policies and plans to improve carbon management, and provides examples of technology and agroecosystem management practices. It includes the latest updates in carbon neutral farming, carbon and energy management, and addresses the knowledge gap between input management, livestock management and agroecosystem management. Advancing agroecosystem science through a roadmap for improving capacity, Agriculture Toward Net Zero Emissions is a valuable resource for those seeking to develop and apply new agricultural best practices.
