

Nonlinear Statistical Modeling

This 2001 collection brings together important contributions by leading econometricians on (i) parametric approaches to qualitative and sample selection models, (ii) nonparametric and semi-parametric approaches to qualitative and sample selection models, and (iii) nonlinear estimation of cross-sectional and time series models. The advances achieved here can have important bearing on the choice of methods and analytical techniques in applied research.

This collection investigates parametric, semiparametric, nonparametric, and nonlinear estimation techniques in statistical modeling.
