

Finocchiaro

Arguments about Arguments

Systematic, Critical, and Historical Essays in Logical Theory

Following an approach that is empirical but not psychological, and dialectical but not dialogical, Maurice Finocchiaro defines concepts such as reasoning, argument, argument analysis, critical reasoning, methodological reflection, judgment, critical thinking, and informal logic. Including extended critiques of the views of many contemporary scholars, he also integrates into the discussion Arnauld's Port-Royal Logic, Gramsci's theory of intellectuals, and case studies from the history of science, particularly the work of Galileo, Newton, Huygens, and Lavoisier.
