Climate Change and Sustainable Development

Law, Policy and Practice

With the profile of environmental issues at an all-time high, this book provides a much needed examination of the related effects of these issues on the property industry. Within the property industry at the moment it is difficult to assume an overview of these issues, and to properly assess the implications of climate change for commercial property. This is the first book that pulls together the different elements of climate change into one coherent argument, explaining what needs to be done to ensure the future of the property market. The main issues discussed are: mitigation, adaptation, energy efficiency and property valuation, in addition to providing informed commentary on the laws and practical guidance to practitioners.
