Ferguson

Structure Reports for 1984, Volume 51B

Organic Compounds

The are published annually and are divided into three main sections. A: (I) metals and (II) inorganic compounds; and B: organic compounds (including organo-metallic compounds). The format of information in individual reports is: names, formulae, papers reported, unit cell and space group data, details of analysis, atomic positions, inter-atomic distances and angles, description and discussion of the structure (with diagrams), and additional references. The subject index is based on the names of the substances as given in the headings of the individual reports. Each volume has also an author index. In addition, cumulative indexes are published as separate volumes. The make the search through hundreds of journals unnecessary, as each volume gives the essence of one year's worldwide literature on crystal structure determinations. Thus, the series forms an essential bank of information.
