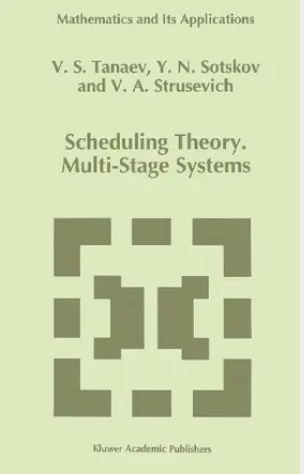
Tanaev / Sotskov / Strusevich

Scheduling Theory

Multi-Stage Systems



An increasing interest to scheduling theory can be attributed to the high level of automation of all branches of human activity. The quality of modern production essentially depends on the planning decisions taken at different stages of a production process. Moreover, while the quality of these decisions is improving, the time and flexibility requirements for decision-making are becoming more important. All this stimulates scheduling research. Started as an independent discipline in the early fifties, it now has become an important branch of operations research. In the eighties, the largest Russian publishing house for scientific literature Nauka Publishers, Moscow, issued two books by a group of Byelorussian mathematicians: Scheduling Theory. Single-Stage Systems by V. S. Tanaev, V. S. Gordon and Y. M. Shafransky (1984) and Scheduling Theory. Multi-Stage Systems by V. S. Tanaev, Y. N. Sotskov and V. A. Strusevich (1989). Originally published in Russian, these two books cover two different major problem areas of scheduling theory and can be considered as a two-volume monograph that provides a systematic and comprehensive exposition of the subject. The authors are grateful to Kluwer Academic Publishers for creating the opportunity to publish the English translations of these two books. We are indebted to M. Hazewinkel, J. K. Lenstra, A. H. G. Rinnooy Kan, D. B. Shmoys and W. Szwarc for their supporting the idea of translating the books into English.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9780792328544
Medium: Buch
ISBN: 978-0-7923-2854-4
Verlag: Springer
Erscheinungstermin: 31.05.1994
Sprache(n): Englisch
Auflage: 1. Auflage 1994
Serie: Mathematics and Its Applications
Produktform: Gebunden
Gewicht: 1690 g
Seiten: 406
Format (B x H): 160 x 241 mm
