

Parallel Numerical Algorithms

In this volume, designed for computational scientists and engineers working on applications requiring the memories and processing rates of large-scale parallelism, leading algorithmicists survey their own field-defining contributions, together with enough historical and bibliographical perspective to permit working one's way to the frontiers. This book is distinguished from earlier surveys in parallel numerical algorithms by its extension of coverage beyond core linear algebraic methods into tools more directly associated with partial differential and integral equations - though still with an appealing generality - and by its focus on practical medium-granularity parallelism, approachable through traditional programming languages.

Several of the authors used their invitation to participate as a chance to stand back and create a unified overview, which nonspecialists will appreciate.

Artikelnummer: 9780792342823

Medium: Buch

ISBN: 978-0-7923-4282-3

Verlag: Springer

Erscheinungstermin: 31.01.1997

Sprache(n): Englisch

Auflage: 1997

Serie: ICASE LaRC Interdisciplinary Series in Science and Engineering

Produktform: Gebunden

Gewicht: 1660 g

Seiten: 395

Format (B x H): 160 x 241 mm
