

Spatial Cognition

Geographic Environments

10.2 Summary of Ideas. 256 10.2.1 Spatial Behavior As Rules For Decision Making. 258
 10.2.2. Cognitive Mapping. 258 10.2.3. Storing Information. ". 260 10.2.4. Searching. 260
 10.2.5. Learning. 261 10.2.6. Judging Similarity. 261 10.2.7 Neural Geographic
 Information Science (NGIS). 262 REFERENCES. 265 INDEX. 279

ACKNOWLEDGEMENTS. 287 x LIST OF TABLES Table 8.1: The types of similarity
 comparisons created for the experiment to determine the effect of x as a first or second
 common or distinctive feature (Lloyd, Rostkowska-Covington, and Steinke 1996). Table
 9.1: Data used to compute the gravity model using regression and a neural network.
 Data for all variables are scaled so that the highest value equals 0.9 and the lowest value
 equals 0.1. Table 9.2: Class means for 11 socio-economic and life-cycle variables for the
 Black, Integrated, and White classes. Table 9.3: Weights for neuron at row 5 and column
 1 that learned the blue horizontal rectangle map symbol. LIST OF FIGURES Figure 1.1:
 Spatial cognition is a research area of interest for both geography and psychology. Both
 disciplines are interested in fundamental ideas related to encoding processes, internal
 representations, and decoding processes. Figure 1.2: The place names on this map of
 New Orleans depict the propositions used for navigation by local residents. A similar map
 appeared in the June 30, 1991, edition of The Times-Picayune.
