Lee / Kim

Scrambling Techniques for CDMA Communications

addresses spreading, scrambling, and synchronization techniques for use in inter-cell synchronous and asynchronous CDMA systems, including the IMT-2000. It provides fundamental background material for sequences and shift register generators, and demonstrates various acquisition techniques in primitive, advanced levels, and in the third generation (3G) DS/CDMA cellular systems. In addition, it introduces the novel acquisition techniques DSA (Distributed Sample Acquisition) and CDMA (Correlation-aided DSA) that enable rapid and robust acquisition of inter-cell synchronous and asynchronous IMT-2000 CDMA systems. will be invaluable to wireless communication engineers, and in particular those involved in theoretical and design works related to spreading, scrambling, and synchronization of CDMA communication systems.

Artikelnummer: 9780792374268
Medium: Buch
ISBN: 978-0-7923-7426-8
Verlag: Springer US
Erscheinungstermin: 30.06.2001
Sprache(n): Englisch
Auflage: Erscheinungsjahr 2001
Serie: The Springer International Series in Engineering and Computer Science
Produktform: Gebunden
Gewicht: 1530 g
Seiten: 348
Format (B x H): 160 x 241 mm
