

## Public Accountability

### Evaluating Technology-Based Institutions

---

presents guidelines for evaluating the research performance of technology-based public institutions, and illustrates these guidelines through case studies conducted at one technology-based public institution, the National Institute of Standards and Technology (NIST). The aim of this book is to demonstrate that a clear, more precise response to the question of performance accountability is possible through the systematic application of evaluation methods to document value.

The authors begin with a review of the legislative history of fiscal accountability beginning with the Budget and Accounting Act of 1921, and ending with the Government Performance and Results Act of 1993. A discussion of existing applicable economic models, methods, and associated metrics follows. The book concludes with evaluation case studies.
