

Bone, Volume IV

Bone: A Treatise is a series of seven volumes devoted to providing the most up-to-date, comprehensive, and authoritative coverage of all aspects of bone. Seventy-four chapters have been written by 127 respected authors, all of whom are actively engaged in basic, applied, and clinical bone research. The seven volumes in this unique series are organized thematically; each volume integrates structure, function, biochemistry, metabolism, and the molecular and clinical aspects of a particular aspect of the biology of bone. Bone-forming cells are treated in Volume I. Bone resorbing cells are covered in Volume II. Volumes III and IV examine the extracellular matrix of bone, with Volume III concentrating on the structure of bone matrix and on bone-specific proteins, while Volume IV focuses on the mineralization (calcification) of that matrix. Volume V addresses the repair and regeneration of bone. Volumes VI and VII explore bone growth and development.
