

AI for Learning

What is artificial intelligence (AI)? How can AI help a learner, a teacher or a system designer? What are the positive impacts of AI on human learning? AI for Learning examines how artificial intelligence can, and should, positively impact human learning, whether it be in formal or informal educational and training contexts. The notion of 'can' is bound up with ongoing technological developments. The notion of 'should' is bound up with an ethical stance that recognises the complementary capabilities of human and artificial intelligence, as well as the objectives of doing good, not doing harm, increasing justice and maintaining fairness. The book considers the different supporting roles that can help a learner – from AI as a tutor and learning aid to AI as a classroom moderator, among others – and examines both the opportunities and risks associated with each.

AI for Learners examines how Artificial Intelligence (AI) can, and should, impact positively on human learning, whether it be in formal or informal educational and training contexts. The book considers the different supporting roles that can help a learner - from AI as a peer to AI as a tutor and AI as an assessor, among other things.
