

## Computer Applications in Engineering and Management

The book Computer Applications in Engineering and Management is about computer applications in management, electrical engineering, electronics engineering, and civil engineering. It covers the software tools for office automation, introduces the basic concepts of database management, and provides an overview about the concepts of data communication, internet, and e-commerce. Additionally, the book explains the principles of computing management used in construction of buildings in civil engineering and the role of computers in power grid automation in electronics engineering. Features - Provides an insight to prospective research and application areas related to industry and technology - Includes industry-based inputs - Provides a hands-on approach for readers of the book to practice and assimilate learning This book is primarily aimed at undergraduates and graduates in computer science, information technology, civil engineering, electronics and electrical engineering, management, academicians, and research scholars.

This book fundamental research contributions from the application of design in to civil, electronic, electrical and management to provide sustainable solutions for the future. It is primarily for graduates in computer science, information technology, civil engineering, electrical engineering, management and research scholars.
