

A Building Information Modelling Maturity Model for Developing Countries

This book provides a reference point for the development of Building Information Modelling (BIM) maturity in the developing country context. Developing countries have been observed to have low BIM maturity and are struggling to adopt the technology amidst no clearly defined pathways for achieving BIM capability maturity. The research presented in this book provides construction industry stakeholders in developing countries with a framework and nomological map to aid in the advancement of BIM implementation. This work provides a pathway for overcoming the challenges inhibiting BIM maturity in developing countries and ultimately its diffusion in order to harness the benefits. The authors provide critical theoretical insights on BIM maturity in the developing country context, a comparative analysis of BIM maturity in both developing and developed countries, and finally, a conceptualisation of BIM maturity for developing countries. The book is unique as its construct is rooted in the state-of-the-art information management standards in the digitalisation era in the construction industry (ISO 19650). The book delivers a theoretical reference point to the academic and research community and for the industry stakeholder, an essential guide to achieving BIM maturity at macro and micro levels.

This book adds important literature to the BIM maturity body of knowledge in developing countries and it fills huge gap in research and industry practice.
