

Housing Standardisation and Design Governance

Equitable access to decent housing remains a major global challenge, particularly for lower-income populations reliant on subsidised, affordable homes. This is exacerbated by the continued commodification of housing, demographic change, and the increasing time many people now spend at home. Addressing these challenges requires, as this book argues, stronger state intervention, closer cooperation between housing regulators, providers, and occupants, and a more robust evidence base that links housing policy, supply, quality, and design, along with a shift towards more long-term social and environmental housing values. This book examines how housing design governance and lived experience shape the quality of homes and the wellbeing of residents, analysing the political, economic, social, historical, and environmental drivers of design. Drawing on new and rich comparative data and evidence from England, Chile, China, the Netherlands, Spain, and Switzerland, it explores how contextual standards, cultural norms, and regulatory practices influence everyday life and perceptions of subsidised housing. Combining historical, technical, and social perspectives through a comparative international lens, this interdisciplinary design research offers a multidimensional understanding of housing quality. It provides insights for policymakers, housing providers, and designers, demonstrating how design research and lived experience can inform standards and policies to create more inclusive, adaptable, and sustainable homes and neighbourhoods, with implications for contemporary housing practice.
