Merged Evolution

Long-term Complications of Biotechnology and Information Technology

Merged Evolution charts the implications of two major forces of change, information technology and biotechnology, combined with a third force, that of 'artificial' information, which is handed down dichronically from computing device to computing device. Through developments anticipated in the near future, Dr. Goonatilake describes the merging of these three systems, a convergence which will profoundly affect the biological, social, and technical fields much more than previous studies have implied. Together these changes yield an entirely different history - and a different future of the world for life, nature and civilization. This book addresses the broader issue arising from these important developments using the unifying perspective of general evolutionary theory to yield a fresh and profound insight.
