

Implementing Environmental Management Accounting: Status and Challenges

This is the third book of selected papers on environmental management accounting (EMA) developed by the Environmental Management Accounting Network - Europe, bringing together several examples of leading international thinking and practice in this rapidly developing area. Leading academics and practitioners from industry cover a range of subjects from individual company experiences with implementing EMA to national experiences regarding the adoption and diffusion of EMA practices. The papers provide several examples of how EMA can be applied in practice, both in large corporations and in small and medium-sized enterprises, and of various tools and techniques applied in this process.

This is the third volume in the Environmental Management Accounting Network (EMAN) series of selected refereed papers on environmental management accounting drawn primarily from papers presented at EMAN-Europe's annual conferences. Most of the papers in this volume were first presented at the 6th EMAN-Europe Annual Conference at the Aarhus School of Business, Denmark, on 23-24 January 2003. The focus of the conference and the papers presented was on implementation of Environmental Management Accounting. That is to say what challenges there are in getting EMA to work in companies, how governments are promoting EMA and how EMA can be supported by for instance IT. From the papers in this volume it can be seen that EMA is becoming more established as a field of practice as well as an academic endeavour. EMA is no longer the sole interest of large multinational companies but is being adopted by SMEs as well as being promoted by various government agencies. EMAN has continued to play an important role in this development by providing a medium through which those interested can contact others with similar interests, and by organising regular events for the dissemination and exchange of news and ideas. EMAN aims to provide a forum in which academics and practitioners can meet to exchange and share ideas and experiences, and this has guided the selection of these papers which include both academic papers grounded in the relevant literature and with reference to theory as appropriate.
