

Targeted Violence

A Statistical and Tactical Analysis of Assassinations, Contract Killings, and Kidnappings

Drawn from case examples of incidents from around the world, *Targeted Violence: A Statistical and Tactical Analysis of Assassinations, Contract Killings, and Kidnappings* is the most complete resource of information on the attack methodologies, tactics used, and groups responsible for targeted killings and kidnappings. The author, a former SWAT and JTTF team member—whose experience includes providing protection to diplomats, high-ranking military personnel, prosecutors, and organized crime informants—presents a wealth of global statistics on assassinations, contract killings, and kidnappings that have occurred from 1950 to the present. Leaving no stone unturned, the book breaks down the various incidents of targeted violence by region, country, month, day of the week, and time of day. It reports on likely locations for each type of attack, success rates, who is likely to initiate the attacks, and who they are most likely to target. The book's easy-to-follow format allows readers, experienced or not in personal protective work, to determine the types of attacks known to have occurred in any region. This complete reference includes 35 case studies that examine attacks on motorcades and pedestrians dating back to 1973—highlighting the lessons to be learned from each example. It analyzes the modus operandi of individual assailants and groups in order to determine commonalities between targeted victims and why certain groups tend to target a specific type of individual. The text concludes with a chapter on victimology. Just like anyone, assassins and hit men fall into routines and can become creatures of habit. By studying and understanding the collection of historical information contained in these pages, security, military, and law enforcement professionals responsible for providing protection will be better prepared to identify potential threats and develop the tactics needed to thwart such attacks.

Drawn from case examples spanning the last 60 years, this book examines incidents of targeted violence, including contract killings, assassinations, and planned kidnappings. Complete with 35 case studies, the text explores numerous attack methodologies employed around the world and regionally. The author, a former SWAT and JTTF team member, analyzes the modus operandi of individual assailants and groups to highlight the commonalities between targeted victims and explain why certain groups tend to target specific types of individuals. The book concludes with a chapter on victimology.
