

Technology Infrastructure and Competitive Position

Global interest in technology-based growth politics is growing as technology becomes an increasingly important factor in economic competitiveness. In spite of increased efforts in many nations to develop more effective industry strategies, most of these endeavors have been ad hoc exercises rather than derived from a consistent framework. Technology Infrastructure and Competitive Position provides that missing framework. It begins by providing an overview of technology-based competition and the relevant issues. A conceptual model is developed that emphasizes the roles and impacts of the supporting infrastructure. Finally, the book addresses the interaction of corporate and governmental roles for providing technology infrastructure, some funding issues and mechanisms for cooperative planning and implementation.
