

Building Trading Bots Using Java

Build an automated currency trading bot from scratch with java. In this book, you will learn about the nitty-gritty of automated trading and have a closer look at Java, the Spring Framework, event-driven programming, and other open source APIs, notably Google's Guava API. And of course, development will all be test-driven with unit testing coverage.

The central theme of is to create a framework that can facilitate automated trading on most of the brokerage platforms, with minimum changes. At the end of the journey, you will have a working trading bot, with a sample implementation using the OANDA REST API, which is free to use.

What You'll Learn

- Find out about trading bots
- Discover the details of tradeable instruments and apply bots to them
- Track and use market data events
- Place orders and trades
- Work with trade/order and account events

Who This Book Is For

Experienced programmers new to bots and other algorithmic trading and finance techniques.
