

BioMEMS and Biomedical Nanotechnology

Volume II: Micro/Nano Technologies for Genomics and Proteomics

Part I. Application of Microarray Technologies: Electronic Microarray Technology and Applications in Genomics and Proteomics.- Gene Expression Profiling Utilizing Microarray Technology and RT-PCR.- Microarray and Fluidic Chip for Extracellular Sensing.- Cell Physiometry Tools Based on Dielectrophoresis.- Hitting the Spot: The Promise of Protein Microarrays.- Use of Electric Field Array Devices for Assisted Assembly of DNA Nanocomponents and Other Nanofabrication Applications.- Peptide Arrays in Proteomics and Drug Discovery.- From One-bead One-compound Combinatorial Libraries to Chemical Microarrays.- Part II. Advanced Microfluidic Devices and Human Genome Project.- Plastic Microfluidic Devices for DNA and Protein Analyses.- Centrifuge Based Fluidic Platforms.- Sequencing the human genome: A historical perspective on challenges for systems integration.- Part III. Nanoprobes for Imaging, Sensing and Therapy.- Hairpin Nanoprobes for Gene Detection.- Fluorescent Lanthanide Labels with Time-resolved Fluorometry in DNA Analysis.- Role of SNPs and Haplotypes in Human Disease and Drug Development.- Control of Biomolecular Activity by Nanoparticle Antennas.- Sequence-dependent Rigidity of DNA: Influence on DNA-protein interactions and DNA in Nanochannels.- Engineered Ribozymes: Efficient Tools for Molecular Gene Therapy and Gene Discovery.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9781489977458

Medium: Buch

ISBN: 978-1-4899-7745-8

Verlag: Springer US

Erscheinungstermin: 23.08.2016

Sprache(n): Englisch

Auflage: Softcover Nachdruck of the original 1. Auflage 2007

Produktform: Kartoniert

Gewicht: 1054 g

Seiten: 540

Format (B x H): 178 x 254 mm
