

Virtual and Mobile Learning Activities in Higher Education

Digitisation has undergone a number of paradigm shifts where structures, processes, and behaviours have changed, including in education. Higher education faces major challenges both pedagogically and technically, but also provides great opportunities to design and teach for self-directed and motivated higher education with smart pedagogy. It is crucial that teachers identify the pedagogical and technological benefits to smart education in order to enhance student-centred learning. Virtual and Mobile Learning Activities in Higher Education is a pivotal reference source that focuses on virtual and mobile learning activities in higher education for student-centred learning and the ways that teachers can design and use different learning activities, both blended and mobile, for self-directed and motivated "smart" education. Additionally, the book examines how students perceive these activities and how the outcomes can be analysed in use with adaptive, resource-enriched, and technology-embedded tools. Highlighting a broad range of topics including feedback activities, mobile learning, and self-assessment, this book is ideally designed for educators, curriculum developers, instructional designers, programmers, software developers, administrators, policymakers, researchers, academicians, and students.
