

Micro and Nano Technologies in Bioanalysis

Methods and Protocols

In recent years, large-scale advances in technology have led to greater understanding of the world on a much tinier scale: the biomolecular level. In , expert researchers from across the globe explore the technology which makes this analysis possible, investigating the worlds of microfluidics and nanotechnologies, and examining physical science techniques for the separation, detection, manipulation, and analysis of biomolecules. This volume contains innovative protocols on the application of microfluidics and the utilization of physical science-related technologies that will prove to be invaluable in the field of molecular biology. Chapters contain cutting edge applications of emerging nanotechnologies, including quantum dots and molecular fluorescence for the imaging and tracking of biomolecules. Composed in the highly successful series format, each chapter contains a brief introduction, step-by-step methods, a list of necessary materials, and a Notes section which shares tips on troubleshooting and avoiding known pitfalls.

Comprehensive and groundbreaking, : is a necessary tool for cellular biologists, biochemists, microbiologists, geneticists and medical researchers alike.

Artikelnummer: 9781934115404

Medium: Buch

ISBN: 978-1-934115-40-4

Verlag: Humana

Erscheinungstermin: 21.07.2009

Sprache(n): Englisch

Auflage: 2009

Serie: Methods in Molecular Biology

Produktform: Gebunden

Gewicht: 1804 g

Seiten: 668

Format (B x H): 198 x 266 mm
