

Digitalization in Industry

Between Domination and Emancipation

This book traces how the current wave of industrial digitalization relates to processes of domination and emancipation. It aims to counter techno-deterministic narratives that would connect a perceived new 'industrial revolution' with clear-cut societal consequences. In order to do this, the volume intervenes into three ongoing discussions which pertain to *emancipation and domination in the workplace*, promises of emancipation through digital fabrication, and the idea of emancipating, configuring, and infrastructuring the users of industrial products. Within this framework it addresses topics including democratic participation, management thinking, gamification, the maker movement, reshoring, digital platforms, and the automation of healthcare.
