

Active Particles, Volume 3

Advances in Theory, Models, and Applications

This edited volume collects six surveys that present state-of-the-art results on modeling, qualitative analysis, and simulation of active matter, focusing on specific applications in the natural sciences. Following the previously published Active Particles volumes, these chapters are written by leading experts in the field and reflect the diversity of subject matter in theory and applications within an interdisciplinary framework. Topics covered include:

- Variability and heterogeneity in natural swarms
- Multiscale aspects of the dynamics of human crowds
- Mathematical modeling of cell collective motion triggered by self-generated gradients
- Clustering dynamics on graphs
- Random Batch Methods for classical and quantum interacting particle systems
- The consensus-based global optimization algorithm and its recent variants

Mathematicians and other members of the scientific community interested in active matter and its many applications will find this volume to be a timely, authoritative, and valuable resource.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783030933043

Medium: Buch

ISBN: 978-3-030-93304-3

Verlag: Springer International Publishing

Erscheinungstermin: 30.03.2023

Sprache(n): Englisch

Auflage: 1. Auflage 2022

Serie: Modeling and Simulation in Science, Engineering and Technology

Produktform: Kartoniert

Gewicht: 365 g

Seiten: 226

Format (B x H): 155 x 235 mm
