

Tailored Light 2

Laser Applications

This book covers the application technology of lasers, focusing more on the vast range of processes than on individual applications, in order to motivate and enable future innovations. The physical basics are presented in the first half of the book. The following examination of application categories and their processes is documented by experts from their practical points of view but always refers back to the underlying physical principles. In this way, readers are free to choose their own individual level of depth in understanding this globally relevant field of innovation.

This new edition of Tailored Light 2: Laser Applications brings the book up to date with the latest applications of laser technology.
