

## Case Studies in the Ethics of Assisted Reproduction

This book evaluates some of the most common ethical issues confronted by reproductive endocrinologists, embryologists, and their teams. The authors apply core ethical principles and approaches to problem solving to each of the cases raised. This work is a guide for both those on the front lines of patient care as well as for students in the field, whatever their background. By outlining sample cases, the book is an instigator for ethical discussions among ethicists, medical practitioners and students.
