

Unsupervised Feature Extraction Applied to Bioinformatics

A PCA Based and TD Based Approach

This updated book proposes applications of tensor decomposition to unsupervised feature extraction and feature selection. The author posits that although supervised methods including deep learning have become popular, unsupervised methods have their own advantages. He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology. This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to difficult situations when there are many features (variables) while only small number of samples are available. The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration, and train tensor decomposition. The author concludes by showing unsupervised methods and their application to a wide range of topics.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783031609817

Medium: Buch

ISBN: 978-3-031-60981-7

Verlag: Springer

Erscheinungstermin: 01.09.2024

Sprache(n): Englisch

Auflage: 2. Auflage 2024

Serie: Unsupervised and Semi-Supervised Learning

Produktform: Gebunden

Gewicht: 992 g

Seiten: 533

Format (B x H): 160 x 241 mm
