

Upper Extremity Reconstruction

From Simple to Complex

From the moment the injured patient enters the emergency room up to composite tissue transplantation, this volume provides a complete guide to the management and reconstruction of limb extremity trauma. It includes every technique, from the simplest intervention to the most complex flaps, from nerve transfers to replantation, with a wealth of original high-quality figures and drawings. The reader will be able to find a solution regardless of the early or late phase of the trauma in the patient, and evaluate the best solution to preserve function while achieving the best aesthetic end-results. This interdisciplinary, carefully built work, covers all tissue reconstruction possibilities in limb extremities, including vessel, nerve, tendon, bone and joints, all examined through the combined lens of plastic surgery and surgical orthopedics. Readers will find detailed coverage of anatomy, pathology, techniques for repair, restoration, regeneration as well as rehabilitation strategies. Against this background, is an ideal guide to the latest treatment modalities that will appeal to all plastic surgeons, orthopedics, traumatologists, nurses and related emergency professionals who wish to learn more about indications, goals, procedures, and expected outcomes.

This book is a companion to the volume Lower Extremity Reconstruction and is also available as set under this ISBN 978-3-032-28557-7.
