

Anesthesia for Transplantation

Transplant anesthesia stands at the crossroads of advanced physiology, high-stakes decision-making, and cutting-edge surgical innovation. This definitive textbook offers a clear, expertly structured guide to the anesthetic care of patients with end-stage organ disease—distilling the complexity of modern transplantation into practical, actionable knowledge. Drawing on the experience of leading clinicians, it equips anesthesia providers to meet the unique challenges of this rapidly evolving specialty.

Organized by organ system, the book delivers comprehensive coverage of preoperative optimization, intraoperative management, and postoperative care across the full spectrum of transplant procedures—including liver, kidney, heart, lung, pancreas, intestinal, pediatric, living-donor, and multi-organ transplantation. Readers will gain a deep understanding of pathophysiology, hemodynamic strategies, immunologic considerations, procurement logistics, and evidence-based protocols essential for ensuring graft success and patient safety.

Designed for trainees and seasoned anesthesiologists alike, this resource empowers clinicians to navigate complex physiologic transitions, anticipate complications, and collaborate effectively within multidisciplinary teams. With its blend of foundational principles, detailed clinical guidance, and forward-looking perspectives, this book sets a new standard for excellence in transplant anesthesia—supporting providers in delivering the highest quality care at every stage of the transplant journey.
